

Acacia holosericea (Strap Wattle)

Spreading shrub with large, obovate, very glaucous phyllodes. Bears yellow rod-shaped flowers. Masses of twisted pods are a feature of the plant even after the seed has fallen. leaves are ovate-lanceolate, 10–25 cm long and 2–9 cm wide, covered with white silky hairs, with 3 to 4 prominent veins. Quick grower. Responds well to pruning.
