

Brachychiton collinus (Outcrop Kurrajong)

Small, deciduous tree found growing in some of the harshest climatic conditions in Australia. This tree most often grows on rocky outcrops where little other scrub, grasses or other understory plants can survive. It is probable that this preference for bare rocky outcrops is a function of the tree's sensitivity to fire.

Type: Small Tree
Aspect: Full Sun/Part Shade
Soil: Well-drained
Habitat: Dry Sclerophyll

Special features:

- Attracts –
 - Bees
 - Birds
