

# Corymbia ptychocarpa (Swamp Bloodwood)

Small tree. The Swamp Bloodwood has some of the largest leaves among the eucalypts, and also some of the largest gumnuts. It is a very showy tree, and attracts masses of birds. The flowers are borne in large clusters on the outside of the tree. Colour forms range from very pale to dark pink, these are followed by large woody capsules to about 4 cm long. Flowering chiefly in summer and autumn, but some flowers may be present in any month.

**Type:** Tree to 8m  
**Aspect:** Full Sun  
**Soil:** Well-drained  
**Habitat:** Dry Sclerophyll

## Special features:

- Attracts –
  - Bees
