

Cryptocarya triplinerivis (Three-veined Laurel)

Tree common along watercourses. Pale green fragrant flowers form on short stemmed panicles from September to December. Fruit ripens from February to May, being a black drupe, 8 to 12 mm across, with a single large seed inside. Leaves are dark glossy green above, paler and hairy below, three veined with an easily seen mid vein. Hairy new growth. Dense crown of dark green leaves.

Type: Tree to 12+m
Aspect: Shade
Soil: Adaptable
Habitat: Dry Sclerophyll

Special features:

- Attracts –
 - Birds
 - Butterflies
- Fragrant Flowers
- Fragrant Foliage
