Are you effectively converting pasture to profit?

Do you want to know how to manage your pasture through the dry season for best livestock production?

This hands on “Stocktake” workshop will give you the tools to balance your available pasture with animal demand.

Learn how to:

- assess land condition (paddock-based assessment that recognises different land types)
- monitor grazing land for ecosystem health and long-term paddock productivity
- manage and interpret data for business planning
- quantify the potential for improved productivity
- calculate forage budgets
