

Macrozamia longispina

Rare cycad on mountains and ridges west of Gympie. Separate male and female plants. Poisonous. It has 6-20 obliquely spreading and pendulous leaves extending from the crown. The leaves are bright green, semi- to highly-glossy, 100-150cm long and with 100-140 leaflets. Cones shed pollen in October and November.

Type: Cycad to 1.5m
Aspect: Part Shade
Soil: Fertile, Moist
Habitat: Montane/Wet Sclerophyll

Special features:

- Attracts –
 - Bees
 - Birds
