

Xanthostemon oppositifolius (Southern Penda)

Listed as vulnerable. Leaves are opposite, occasionally sub-opposite on the stem. The leaf stalk is 0.5–1.5 cm long and the leaf blade is 4–9cm long. The white flowers are in bunches of three to nine in leaf axils, each flower on a stalk 1–2 cm long. The petals are 4–6 mm long and the stamens are numerous. Fruits are woody, and the seeds are not winged. Penda is found predominantly along watercourses.

Type: Tree to 12m
Aspect: Full Sun/Part Shade
Soil: Adaptable
Habitat: Riverine
